

# ALUMINUM FITTING COVERS

## Submittal / Data Sheet

(July 1, 2013)

### PRODUCT DESCRIPTION:

Heavy duty aluminum (2 piece) fitting covers, are made for "groove lock" type fittings, and are manufactured from 1100 alloy in .032 thickness, with a smooth finish.

The fitting covers come in three (3) shapes: 90° (short radius), 45°, and Tees. Other popular fitting sizes and coupler/flange covers to be available in the near future.

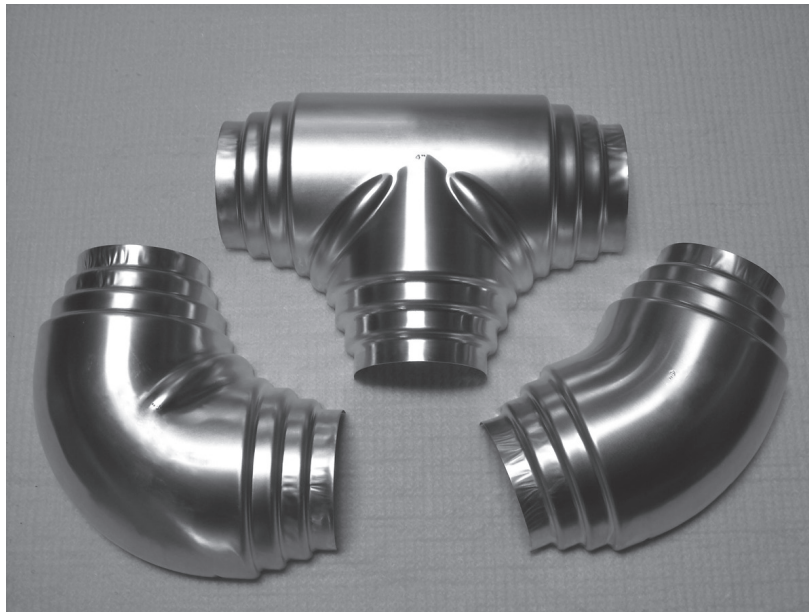

They are manufactured with removable steps to adjust for different insulation thicknesses. By having the removable steps, we can accommodate twelve (12) different size/thickness combinations, with only three (3) sizes needed.

These fittings are available for 2½" through 6" pipe sizes. The two (2) piece halves can be easily attached and installed by using self tapping screws or pop rivets.

Our fitting covers are engineered with three (3) recessed alignment grooves in the heel of each fitting. This helps with the overlap, to guide screws or drill for rivets, and creates a flush attachment surface. They are designed to allow for plenty of insulation inside, without being compressed, which also offers room for heat trace.

### PRODUCT DATA:

Aluminum fitting covers meet ASTM B209

"Made in the USA"
